

PP95MX pleated filtration cartridges

Pleated filtration cartridges

PP95MX
Polypropylene Pleated

5 Layers

High filter surface

High loading capacity of particles with homogeneous size

PP95MX cartridges consist of: 3-layer polypropylene filtering septum supported by an external PP drainage net and an internal PP drainage net (**5 Layers** filtering system); internal support and moulded rigid polypropylene terminals. The external drainage net of the **5 Layers** filter system prevents the crease from closing due to the increase in pressure due to the dirty filter material, always ensuring the constant outflow of filtered water towards the internal support of the cartridge.

PP95MX cartridges, thanks to the special filter system **5 Layers**, guarantee a longer life compared to the normal filter cartridges on the market having the same surface. These cartridges are ideal for the final finishing of water containing homogeneous particle sizes (up to a maximum of 1 ppm TSS).

PP95MX cartridges are produced in the following filtration grades: 1, 5, 10, 20, 50 μ with 95% removal efficiency (99.98% absolute on request).
