

N95BL depth filtration cartridges

The **N95BL** cartridges are made of extruded polypropylene with internal support and rigid molded polypropylene terminals.

The **N95BL** cartridges guarantee very high load capacity thanks to the **double gradient** double filtering layer.

The first layer accumulates the coarsest particles while the second layer performs the final finishing by retaining the smaller particles.

These cartridges are ideal for treating non-refined water with high presence of suspended solids (up to a maximum of 1 ppm TSS) with heterogeneous particle distribution.

N95BL cartridges are produced in the following filtration grades:
1-10 μ , 5-20 μ , 20-50 μ , 50-90 μ with 95% removal efficiency (99.98% absolute on request).
