BasketBlueS

Basket Filters

Model: BasketBlue FBBL-S

Basket filters BasketBlueS

A basket filter is a type of filter designed for the removal of all suspended solids present in surface waters (rivers, lakes, sea) of wells and springs. Basket filters are used for te removal from water of: leaves. Branches, pebbles, sand, rust, pests, insects and other large particles.

Basket filters guarantee:

- high performance
- easy and quick maintenance
- cost saving

MADE IN ITALY

MADE IN EUROPEAN UNION

BasketBlueS basket filters are technically and economically the best solution currently available on the market as pretreatment for self-cleaning filters, for the protection of pumps and to give continuity to the filtration process after sand filters or resin plants for the construction of high flow filtration plants.

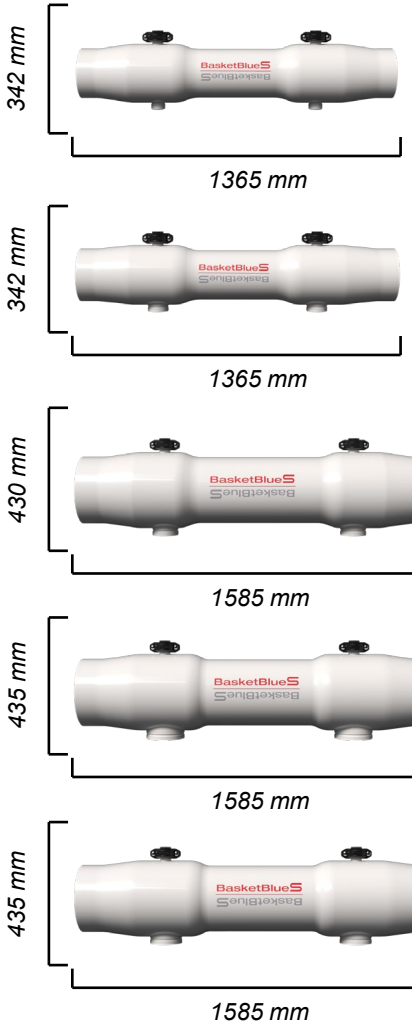

Their undisputed uniqueness, thanks to the uso of certified raw materials of high quality, always guarantees better performance than any possibile alternative.

the most technologically advanced solution for filtration with filter baskets

Basket filters BasketBlueS

BasketBlueS basket filters are produced in different sizes:

2'' VICTAULIC
Flow rate up to 27 m³/h

3'' VICTAULIC
Flow rate up to 54 m³/h

4'' VICTAULIC
Flow rate up to 108 m³/h

5'' VICTAULIC
Flow rate up to 144 m³/h

6'' VICTAULIC
Flow rate up to 198 m³/h

BasketBlueS basket filters guarantee:

Versatile

Ideal for installation in both brackish water and seawater

Absolute corrosion resistance

Made with plastic (heads) and fiberglass (body) of absolute quality

High pressure resistance

Possibility to operate up to 10 bar (20 bar on request)

Why choose BasketBlueS: structure

BasketBlackS basket filters consist of 3 basic parts:

1 FILTER BASKET

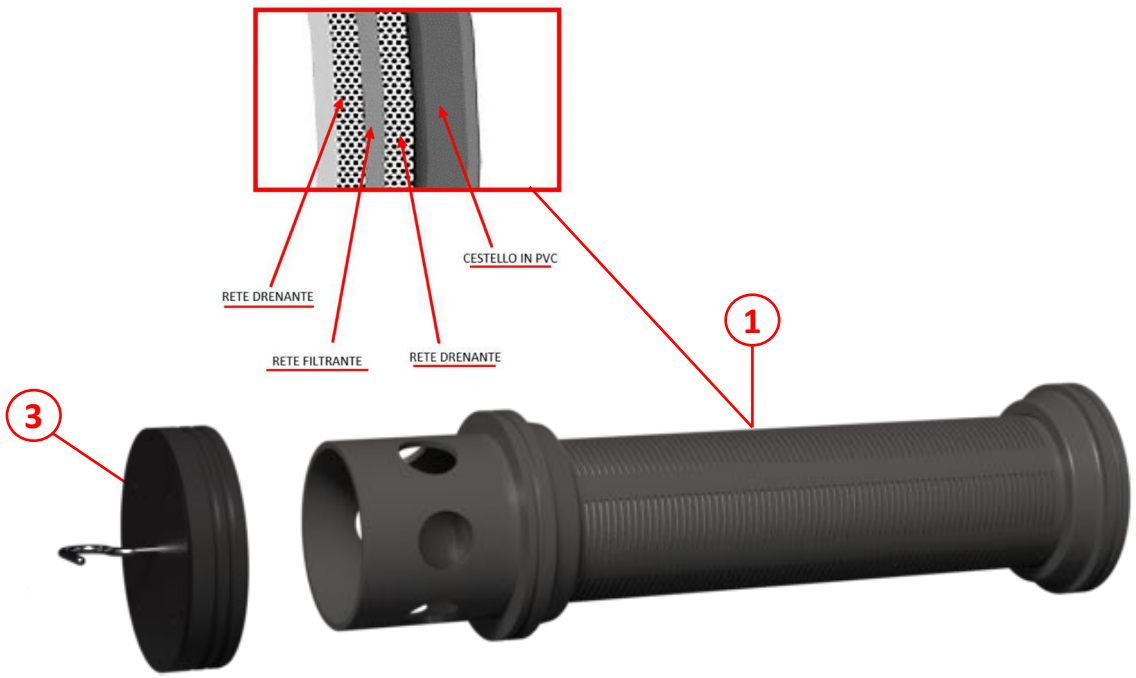

The filter basket is the ‘’operational‘’ part of the filter, it is made entirely of plastic material (PVC) inside which there are two polypropylene drainage nets and a polyester filter net; this allows you to make the most of the entire filter surface of the basket.
The filter basket retains particles in the water ranging in size from 50 µm to 3000 µm with a high efficiency rate of 85%.

2 FILTER BODY

Made of fiberglass (FRP) is perfectly compatible with all types of water. The filter body, together with the filter caps, contains the filter element (basket). The filter body ensures perfect pressure tightness (up to 10 bar).

3 FILTER CAPS

Made of polyvinyl chloride (PVC-U) they are perfectly compatible with all types of water. The filter caps, together with the filter body, contain the filter element.

Why choose BasketBlackS: easy of maintenance

Installing the **BasketBlueS** basket filters is very simple and takes just a couple of minutes.

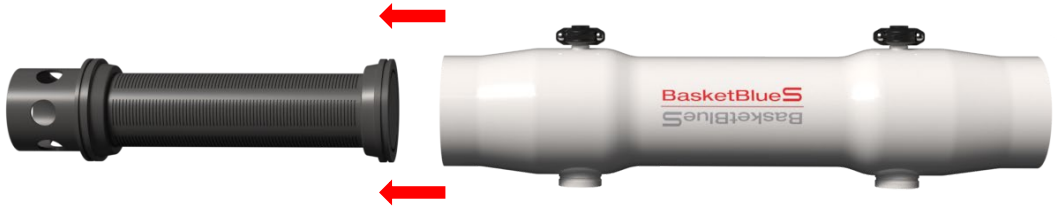

1. Unscrew the screws, then remove the crescent-shaped seals from their seats in the **BasketBlueS** filter housing:

2. Remove the cap from the **BasketBlueS** filter housing using the handle provided:

3. Carefully grasp and remove the basket from the **BasketBlueS** filter housing:

4. Reinsert the basket, followed by the sealing half-moons; insert the screws and tighten them carefully to reassemble the **BasketBlueS** filter:

Why choose BasketBlueS

Uniqueness

BasketBlueS basket filters are absolutely **unique** products because:

- They are the synthesis of the best technologies currently available on the market
- They are available in various sizes and can be installed either vertically or horizontally
- They are designed to accommodate a multi-layer filter basket that allows optimal filtration

Simplicity

BasketBlueS basket filters are absolutely easy to use:

- One operator opens and closes the **BasketBlueS** container manually and in a few minutes.
- **BasketBlueS** filter baskets are inserted and removed quickly by coupling to one another thanks to the special bayonet mount.
